

Attention Users

Beginning May 1, 2017, all e-commerce systems, including eBill, will be discontinuing support for a security standard called TLS version 1.0. To ensure you can continue to access e-commerce systems, such as eBill, after May 1, 2017, we recommend that you review your browser settings and verify that the browser is enabled to support TLS version 1.1 or higher. You can test your browser prior to the upcoming May 1, 2017 deadline by making a connection to <https://www.ssllabs.com/ssltest/viewMyClient.html> using the same platform (operating system, browser version, etc.) that you use to access e-commerce systems, such as eBill.

If it is determined that your browser does not support TLS 1.1, then do the following: For Firefox and Chrome, update your browser to the latest version. For Internet Explorer, search the Internet using your favorite search engine, such as Google or Yahoo for "Internet Explorer TLS v1.1" to find instructions on how to check your settings in Internet Explorer.
