Evolution and Revolution in Medical Education – Global Challenges and Solutions in Health Professions Education

The fall 2017 IAMSE Web Seminar Series takes on an increased international flavor as presenters review health professions education around the world each with unique challenges and solutions. The goal of this series is to foster the exchange of ideas in the community of health science educators. The series begins with an overview of medical education in Canada with an emphasis on the initiatives of the International Competencies in Basic Medical Education (ICBME). From the Far East, we will hear a presentation on Chinese medical education (World-China initiative) which places an emphasis on primary care in China. A panel will provide an overview of the European model of health professions education from globalization of education to global healthcare. Another presentation will explore medical education challenges and solutions in Sub-Saharan Africa. The series will conclude with a session focusing on an integrated model of medical care: childhood disease prevention in South America.

**Sept. 7:** The Rising Tide of Competency-based Medical Education: A Global View  
*Presented by Jason Frank - 527 O'Dowd, OUWB Campus*

**Sept. 14:** The Future of Family Medicine: In China  
*Presented by William Burke - 478 O'Dowd, OUWB Campus*

**Sept. 21:** Globalization of Education to Global Healthcare overview of European Model  
*Presented by Jen Cleland and Meabh Bhuinneain - 216U O'Dowd, OUWB Campus*
